

## RF Exposure Evaluation Declaration

---

**FCC ID:** 2AD8UFZCWO2CA1

**APPLICANT:** Nokia Solutions and Networks, OY

**Application Type:** Certification

**Product:** AC220 Wi-Fi AP OD directional antenna US

AC220 Wi-Fi AP OD external antenna US

AC220 Wi-Fi AP OD small omni antenna US

**Model No.:** WO2C-AC220

**Trademark:** NOKIA

**FCC Classification:** Digital Transmission System (DTS)  
Unlicensed National Information Infrastructure (UNII)

**Test Procedure(s):** KDB 447498 D01v06

Reviewed By : *Paddy Chen*

| Type of Modulation    | 802.11a/n/ac: OFDM  |
| Modulation Technology | CCK, DQPSK, DBPSK for DSSS<br>16QAM, 64QAM, 256QAM, QPSK, BPSK for OFDM   |

Note: The model difference as below:

- when the device has been connected the Galtronics Directional antenna, the product name is “AC220 Wi-Fi AP OD directional antenna US”;
- when the device has been connected the PCTEL antenna, the product name is “AC220 Wi-Fi AP OD external antenna US”;
- when the device has been connected the Galtronics Small Omni antenna, the product name is “AC220 Wi-Fi AP OD small omni antenna US”;

## 1.2. Antenna Description

| Antenna  | Manufacture | Frequency Band (MHz) | Antenna Type        | Part Number       |
|--|-------------|----------------------|---------------------|-------------------|
|  | Galtronics  | 2412 ~ 2472          | Directional Antenna | 02078140-06561U2  |
|  |             | 5150 ~ 5850          |                     |                   |
|  | PCTEL, Inc. | 2412 ~ 2472          | Panel Antenna       | FPMI2458-DP2RPSMA |
|  |             | 5150 ~ 5850          |                     |                   |
|  | Galtronics  | 2412 ~ 2472          | Small Omni Antenna  | 02078140-06561U1  |

| Antenna Type        | Frequency Band (MHz)            | TX Paths | Per Chain Max Antenna Gain (dBi) |       | Beam Forming Directional Gain (dBi) | CDD Directional Gain (dBi) |         |
|---------------------|---------------------------------|----------|----------------------------------|-------|-------------------------------------|----------------------------|---------|
|                     |                                 |          | Ant 1                            | Ant 2 |                                     | For Power                  | For PSD |
| Directional Antenna | 2412 ~ 2462                     | 2        | 9.00                             | 9.00  | 12.01                               | 9.00                       | 12.01   |

|                     | 5250 ~ 5350                     | 2        | 5.00                             | 5.00  | 8.01                                | 5.00                       | 8.01    |
|                     | 5470 ~ 5725                     | 2        | 5.00                             | 5.00  | 8.01                                | 5.00                       | 8.01    |
|                     | 5725 ~ 5850                     | 2        | 5.00                             | 5.00  | 8.01                                | 5.00                       | 8.01    |
| Small Omni Antenna  | 2412 ~ 2462                     | 2        | 5.25                             | 5.25  | 8.26                                | 5.25                       | 8.26    |
|                     | 5150 ~ 5250                     | 2        | 6.50                             | 6.50  | 9.51                                | 6.50                       | 9.51    |
|                     | 5150 ~ 5250 30° elevation angle | 2        | -1.25                            | -1.25 | 1.76                                | -1.25                      | N/A     |
|                     | 5250 ~ 5350                     | 2        | 6.50                             | 6.50  | 9.51                                | 6.50                       | 9.51    |
|                     | 5470 ~ 5725                     | 2        | 6.50                             | 6.50  | 9.51                                | 6.50                       | 9.51    |
|                     | 5725 ~ 5850                     | 2        | 6.50                             | 6.50  | 9.51                                | 6.50                       | 9.51    |

Note:

- The EUT supports Cyclic Delay Diversity (CDD) mode, and CDD signals are correlated.  
For CDD transmissions, directional gain is calculated as follows,  $N_{\text{ANT}} = 2$ ,  $N_{\text{SS}} = 1$ .
  - If all antennas have the same gain,  $G_{\text{ANT}}$ , Directional gain =  $G_{\text{ANT}} + \text{Array Gain}$ , where Array Gain is as follows.
    - For power spectral density (PSD) measurements on all devices,  
Array Gain =  $10 \log (N_{\text{ANT}} / N_{\text{SS}})$  dB = 3.01;
    - For power measurements on IEEE 802.11 devices,  
Array Gain = 0 dB for  $N_{\text{ANT}} \leq 4$ ;
  - If antenna gains are not equal, the user may use either of the following methods to calculate directional gain, provided that each transmit antenna is driven by only one spatial stream:
    - Directional gain may be calculated by using the formulas applicable to equal gain antennas with  $G_{\text{ANT}}$  set equal to the gain of the antenna having the highest gain;

$$\bullet \text{ DirectionalGain} = 10 \cdot \log \left[ \frac{\sum_{j=1}^{N_{SS}} \left\{ \sum_{k=1}^{N_{ANT}} g_{j,k} \right\}^2}{N_{ANT}} \right]$$

$g_{j,k} = 10^{G_k/20}$  if the kth antenna is being fed by spatial stream j, or zero if it is not;

$G_k$  is the gain in dBi of the kth antenna.

2. The EUT also supports Beam Forming mode, and the Beam Forming support 802.11n, not include 802.11a/ac.

Correlated signals include, but are not limited to, signals transmitted in any of the following modes:

- Any transmit Beam Forming mode, whether fixed or adaptive (e.g., phased array modes, closed loop MIMO modes, Transmitter Adaptive Antenna modes, Maximum Ratio Transmission (MRT) modes, and Statistical Eigen Beam Forming (EBF) modes).

Unequal antenna gains, with equal transmit powers. For antenna gains given by  $G_1, G_2, \dots, G_N$  dBi.

- transmit signals are correlated, then
- Directional gain =  $10 \cdot \log[(10^{G_1/20} + 10^{G_2/20} + \dots + 10^{G_N/20})^2 / N_{ANT}]$  dBi [Note the “20”s in the denominator of each exponent and the square of the sum of terms; the object is to combine the signal levels coherently.]

## 2. RF Exposure Evaluation

### 2.1. Limits

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

#### LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency Range (MHz)                                     | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm <sup>2</sup> ) | Average Time (Minutes) |
|---|-------------------------------|-------------------------------|-------------------------------------|------------------------|
| (A) Limits for Occupational/ Control Exposures            |                               |                               |                                     |                        |
| 300-1500  | --                            | --                            | f/300                               | 6                      |
| 1500-100,000  | --                            | --                            | 5                                   | 6                      |
| (B) Limits for General Population/ Uncontrolled Exposures |                               |                               |                                     |                        |
| 300-1500  | --                            | --                            | f/1500                              | 6                      |
| 1500-100,000  | --                            | --                            | 1                                   | 30                     |

f= Frequency in MHz

Calculation Formula:  $P_d = (P_{out} \cdot G) / (4 \cdot \pi \cdot r^2)$

Where

$P_d$  = power density in mW/cm<sup>2</sup>

$P_{out}$  = output power to antenna in mW

$G$  = gain of antenna in linear scale

$\pi$  = 3.1416

$r$  = distance between observation point and center of the radiator in cm

$P_d$  is the limit of MPE, 1mW/cm<sup>2</sup>. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance  $r$  where the MPE limit is reached.

## 2.2. Test Result of RF Exposure Evaluation

|               |  |
|---------------|--|
| Product Name: | AC220 Wi-Fi AP OD directional antenna US<br>AC220 Wi-Fi AP OD external antenna US<br>AC220 Wi-Fi AP OD small omni antenna US |
| Test Item     | RF Exposure Evaluation (For General Population)  |

### Directional Antenna:

| Test Mode  | Frequency Band (MHz)       | Maximum EIRP (dBm) | Safety Distance (cm) | Power Density (mW/cm <sup>2</sup> ) | Limit of Power Density (mW/cm <sup>2</sup> ) |
|--|----------------------------|--------------------|----------------------|-------------------------------------|--|
| 802.11b/g/n-HT20/n-HT40                            | 2412 ~ 2462                | 35.37              | 25                   | 0.4384                              | 1  |
| 802.11a/n-HT20/n-H40/ac-VHT20<br>ac-VHT40/ac-VHT80 | 5250 ~ 5350<br>5470 ~ 5725 | 29.77              | 25                   | 0.1208                              | 1  |

Note 1: Directional Gain of Beam-Forming Mode Calculation as below:

$$2412 \sim 2462\text{MHz Directional Gain} = 10 \cdot \log[(10^{9.00/20} + 10^{9.00/20})^2/2] = 12.01 \text{ dBi}$$

Note 2: Directional Gain of CDD Mode Calculation as below:

$$5250 \sim 5350\text{MHz} = 11.00 \text{ dBi}$$

$$5470 \sim 5725\text{MHz} = 10.50 \text{ dBi}$$

### Panel Antenna:

| Test Mode  | Frequency Band (MHz)       | Maximum EIRP (dBm) | Safety Distance (cm) | Power Density (mW/cm <sup>2</sup> ) | Limit of Power Density (mW/cm <sup>2</sup> ) |
|--|----------------------------|--------------------|----------------------|-------------------------------------|--|
| 802.11b/g/n-HT20/n-HT40                            | 2412 ~ 2462                | 33.34              | 20                   | 0.4293                              | 1  |
| 802.11a/n-HT20/n-H40/ac-VHT20<br>ac-VHT40/ac-VHT80 | 5250 ~ 5350<br>5470 ~ 5725 | 29.63              | 20                   | 0.1827                              | 1  |

Note: Directional Gain of Beam-Forming Mode Calculation as below:

$$2412 \sim 2462\text{MHz Directional Gain} = 10 \cdot \log[(10^{6.00/20} + 10^{6.00/20})^2/2] = 9.01 \text{ dBi}$$

$$5250 \sim 5350\text{MHz Directional Gain} = 10 \cdot \log[(10^{5.00/20} + 10^{5.00/20})^2/2] = 8.01 \text{ dBi}$$

$$5470 \sim 5725\text{MHz Directional Gain} = 10 \cdot \log[(10^{5.00/20} + 10^{5.00/20})^2/2] = 8.01 \text{ dBi}$$

**Small Omni Antenna:**

| Test Mode  | Frequency Band (MHz)       | Maximum EIRP (dBm) | Safety Distance (cm) | Power Density (mW/cm <sup>2</sup> ) | Limit of Power Density (mW/cm <sup>2</sup> ) |
|--|----------------------------|--------------------|----------------------|-------------------------------------|--|
| 802.11b/g/n-HT20/<br>n-HT40                            | 2412 ~ 2462                | 32.58              | 20                   | 0.3604                              | 1  |
| 802.11a/n-HT20/<br>n-H40/ac-VHT20<br>ac-VHT40/ac-VHT80 | 5250 ~ 5350<br>5470 ~ 5725 | 29.60              | 20                   | 0.1814                              | 1  |

Note 1: Directional Gain of Beam-Forming Mode Calculation as below:

2412 ~ 2462MHz Directional Gain =  $10 \cdot \log[(10^{5.25/20} + 10^{5.25/20})^2/2] = 8.26 \text{ dBi}$

Note 2: Directional Gain of CDD Mode Calculation as below:

5250 ~ 5350MHz = 6.50 dBi

5470 ~ 5725MHz = 6.50 dBi

|               |  |
|---------------|--|
| Product Name: | AC220 Wi-Fi AP OD directional antenna US<br>AC220 Wi-Fi AP OD external antenna US<br>AC220 Wi-Fi AP OD small omni antenna US |
| Test Item     | RF Exposure Evaluation (For Occupational)  |

#### Directional Antenna:

| Test Mode  | Frequency Band (MHz)       | Maximum EIRP (dBm) | Safety Distance (cm) | Power Density (mW/cm <sup>2</sup> ) | Limit of Power Density (mW/cm <sup>2</sup> ) |
|--|----------------------------|--------------------|----------------------|-------------------------------------|--|
| 802.11b/g/n-HT20/<br>n-HT40                            | 2412 ~ 2462                | 35.37              | 20                   | 0.6851                              | 5  |
| 802.11a/n-HT20/<br>n-H40/ac-VHT20<br>ac-VHT40/ac-VHT80 | 5250 ~ 5350<br>5470 ~ 5725 | 29.77              | 20                   | 0.1887                              | 5  |

Note 1: Directional Gain of Beam-Forming Mode Calculation as below:

2412 ~ 2462MHz Directional Gain =  $10 \cdot \log[(10^{9.00/20} + 10^{9.00/20})^2/2] = 12.01$  dBi

Note 2: Directional Gain of CDD Mode Calculation as below:

5250 ~ 5350MHz = 11.00 dBi

5470 ~ 5725MHz = 10.50 dBi

#### Panel Antenna:

| Test Mode  | Frequency Band (MHz)       | Maximum EIRP (dBm) | Safety Distance (cm) | Power Density (mW/cm <sup>2</sup> ) | Limit of Power Density (mW/cm <sup>2</sup> ) |
|--|----------------------------|--------------------|----------------------|-------------------------------------|--|
| 802.11b/g/n-HT20/<br>n-HT40                            | 2412 ~ 2462                | 33.34              | 20                   | 0.4293                              | 5  |
| 802.11a/n-HT20/<br>n-H40/ac-VHT20<br>ac-VHT40/ac-VHT80 | 5250 ~ 5350<br>5470 ~ 5725 | 29.63              | 20                   | 0.1827                              | 1  |

Note: Directional Gain Calculation as below:

2412 ~ 2462MHz Directional Gain =  $10 \cdot \log[(10^{6.00/20} + 10^{6.00/20})^2/2] = 9.01$  dBi

5250 ~ 5350MHz Directional Gain =  $10 \cdot \log[(10^{5.00/20} + 10^{5.00/20})^2/2] = 8.01$  dBi

5470 ~ 5725MHz Directional Gain =  $10 \cdot \log[(10^{5.00/20} + 10^{5.00/20})^2/2] = 8.01$  dBi

**Small Omni Antenna:**

| Test Mode  | Frequency Band (MHz)       | Maximum EIRP (dBm) | Safety Distance (cm) | Power Density (mW/cm <sup>2</sup> ) | Limit of Power Density (mW/cm <sup>2</sup> ) |
|--|----------------------------|--------------------|----------------------|-------------------------------------|--|
| 802.11b/g/n-HT20/<br>n-HT40                            | 2412 ~ 2462                | 32.58              | 20                   | 0.3604                              | 5  |
| 802.11a/n-HT20/<br>n-H40/ac-VHT20<br>ac-VHT40/ac-VHT80 | 5250 ~ 5350<br>5470 ~ 5725 | 29.60              | 20                   | 0.1814                              | 5  |

Note 1: Directional Gain of Beam-Forming Mode Calculation as below:

2412 ~ 2462MHz Directional Gain =  $10 \cdot \log[(10^{5.25/20} + 10^{5.25/20})^2/2] = 8.26 \text{ dBi}$

Note 2: Directional Gain of CDD Mode Calculation as below:

5250 ~ 5350MHz = 6.50 dBi

5470 ~ 5725MHz = 6.50 dBi

### 2.3. Summary of Test Result

The maximum calculations of above situations

| Model              | Configuration | The formula of calculated the MPE (mW/cm <sup>2</sup> ) | Calculation Power Density (mW/cm <sup>2</sup> ) | Limit | Result |
|--------------------|---------------|---|---|-------|--------|
| General Population | 2.4GHz + 5GHz | 0.4293 + 0.1827   | 0.6120  | 1     | Pass   |
| Occupational       | 2.4GHz + 5GHz | 0.6851 + 0.1887   | 0.8738  | 5     | Pass   |

The wireless device described within this report has been shown to be capable of compliance with basic restrictions related to human exposure to electromagnetic fields for both General public and Occupational. The calculations shown in this report were made in accordance the procedures specified in the applied test specifications

| Antenna Type        | Configuration | Required Compliance Boundary (cm) |              |
|---------------------|---------------|-----------------------------------|--------------|
|                     |               | General Population                | Occupational |
| Directional Antenna | 2.4GHz + 5GHz | 25                                | 20           |
| Panel Antenna       | 2.4GHz + 5GHz | 20                                | 20           |
| Small Omni          | 2.4GHz + 5GHz | 20                                | 20           |
